Predictive Services Discussion: An upper high will strengthen and shift northward to the western slope of the central Rockies. A pair of weak mid-level shortwave troughs are forecast to rotate around the western edge of the upper high over the California coast and the Sierra into western Nevada. These troughs will help initiate isolated to scattered mixed wet and dry thunderstorms across portions of southern and central California into the western Great Basin. Isolated dry thunderstorms may also form in northern Idaho and western Montana with very hot, dry, and unstable conditions across the inland Pacific Northwest, Northern Rockies and Plains into northern Minnesota, and northern Great Basin. Scattered to widespread wet thunderstorms are expected to continue across the Southwest, southern Great Basin, and southern Colorado. Thunderstorms are likely along and south of a surface front from the central Plains into the Mid-Atlantic. Warm and dry conditions are expected across much of Alaska.

Responding To Vehicle Fires

Vehicles/Roads Category

Suppression of vehicle fires is extremely dangerous and poses many health and safety hazards to firefighters. The following procedures are recommended:

- Wear a high-visibility reflective vest or other high-visibility clothing.
- Secure the scene and provide or request assistance for traffic control.
- Park your vehicle to provide a protective barricade for you and your crew. Position it so that an inattentive or drunk driver will hit your vehicle and not your crew. Your vehicle is expendable; you are not.
- Provide for your escape route at the scene.
- Do not use road flares if fuel is leaking from the vehicle.
- Do not breathe any smoke. Smoke from vehicle fires contains toxic chemicals that will kill you.
- Vehicle fires are considered a hazardous materials scene. Suppression action should only be taken if the crew is trained, equipped, and authorized in the use of Self-Contained Breathing Apparatus (SCBA).
- If taking suppression action on wildland fuels, firefighters should ensure that they are a safe distance from the burning vehicle (100 feet minimum), and avoid contact with vehicle fire smoke or fumes.
